

# Minnesota Elevator & Highland Electric *Team Up!*

MEI Manufacturing Headquarters | Mankato, MN

Since 1971 MEI has been specializing in installation, service, repair, and manufacturing of quality passenger and freight elevators. MEI equipment is found in nearly every US state.

## **Minnesota Elevator and Highland Electric team up to provide added value for our customers.**

Elevator work often includes getting an electrical contractor involved. MEI will provide a competitive price that will include the necessary electrical work and coordinate your project with Highland Electric saving you both time and money.

## **If I have an older elevator why would there be a need for electrical work?**

Minnesota state elevator code chapter 1307.0090 requires all elevators, new or existing, to be provided with lighting of 19fc at the elevator mechanical room floor and 10fc at the pit floor. The NEC (National Electrical Code) also calls for all equipment connected with the elevator to have over current devices located in the machine room, and GFCI recepticals are required in the elevator pit.

## **How can I determine if my elevator lighting meets the current code requirements?**

One easy phone call to Minnesota Elevator, Inc. **1-800-450-3060** and a representative will schedule a free evaluation to determine if your elevator lighting meets the latest electrical code requirements.

## **What if I need other electrical work done that does not pertain to the elevator?**

For all of your electrical needs you can contact Highland Electric by email [sales@highland-electric.com](mailto:sales@highland-electric.com) or phone (651) 690-1551. For over 35 years Highland Electric has been providing exceptional service.
